

COURTassist

by  NEWSYS

COURTassist is a full-function Court Management System designed to provide court administrative and courtroom support service automation for municipal courts that handle traffic and / or criminal cases.

With **COURTassist**, courtroom personnel can quickly access the data they need on defendants, cases, history, sentencing, calendaring, etc. With the ease of use that is built into the system, cases are handled efficiently and quickly. With the **ACPassist*** application, information regarding alternative sentencing and education programs and classes can be accessed in the courtroom.

Financial management and accounting are important components of the **COURTassist** system. The ability to accurately account for fines, fees, bails and bonds is a must when running an efficient municipal court operation. Tracking fines and fees related to both the original and suspended sentence are key to accounting court revenues. All accounting functions and reports adhere to generally accepted accounting principles and rules.

COURTassist provides a number of key interfaces; City Attorney, Detention & Enforcement (Jail), Department of Motor Vehicles (DMV), credit card authorizations, and many others. Interfaces to agencies and other judicial enforcement agencies are also available. The ability to transmit the data in a secure and safe manner is a must.

One of the key features of the **COURTassist** system is flexibility. By utilizing user-defined tables for user preferences, the application can be customized to address policy and business rule change needs. Support for multiple departments exists as well. With the same “look and feel” found throughout the system, users can be quickly trained in different areas of the court.

The **COURTassist** system was developed using the latest Microsoft technologies. The application was written using Microsoft's .NET framework environment. The system is extremely scalable, with support for both small and large jurisdictions. Relational database structures allow for data retrieval in a very quick and secure manner.

FEATURES:

- Pre-Trial Service Support
 - Work Queues
 - Kites
 - Mental Health Needs
- Courtroom Operations
 - Daily Calendar
 - Sentencing
 - Warrants
 - Contempts
 - Proceedings
